Easy open guarding for cutter exchange and cleaning of metal chips.

Guards are locked down by push-to-open detent pins.

Clear guarding allows for full visibility for cleaning and cutter inspection.

Easily access motor pulleys and belt for replacement.

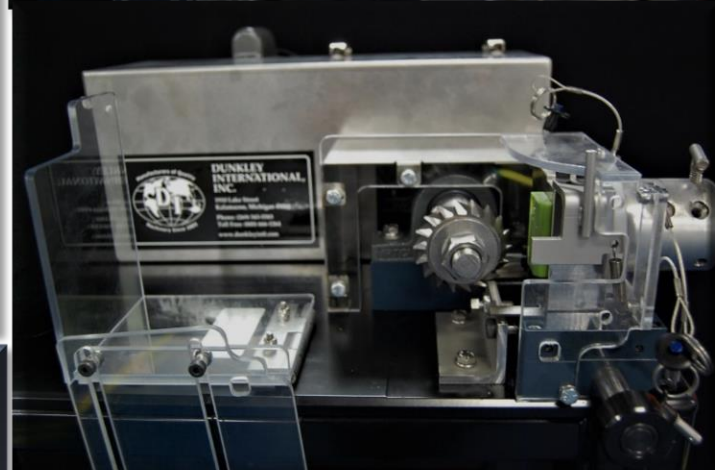

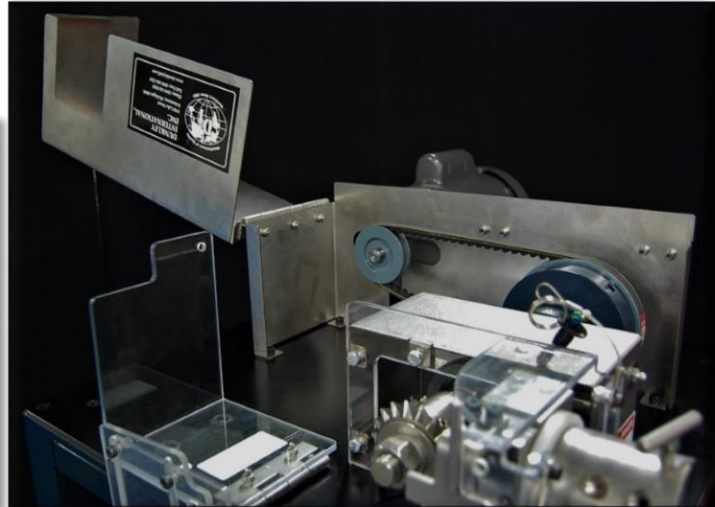

Hard stops for needle and slide give higher repeatability. Includes automatic retraction for both.

Rotational adjustment on handle for user preference.

Automatic return increases needles/hour.

Adjustable detent underneath to lock down the needle during operation and easily index to the next flute.

All adjustments will be preset by Dunkley before shipment for optimal flute cutting.

Cutting distance fully adjustable.

Cutting upwards **reduces** needle processing time and **increases** needle quality.
