

# DUNKLEY INTERNATIONAL, INC.

## JUNIOR CHERRY PITTER

Dunkley International is excited to introduce our new and updated Dunkley Jr. Cherry Pitter!

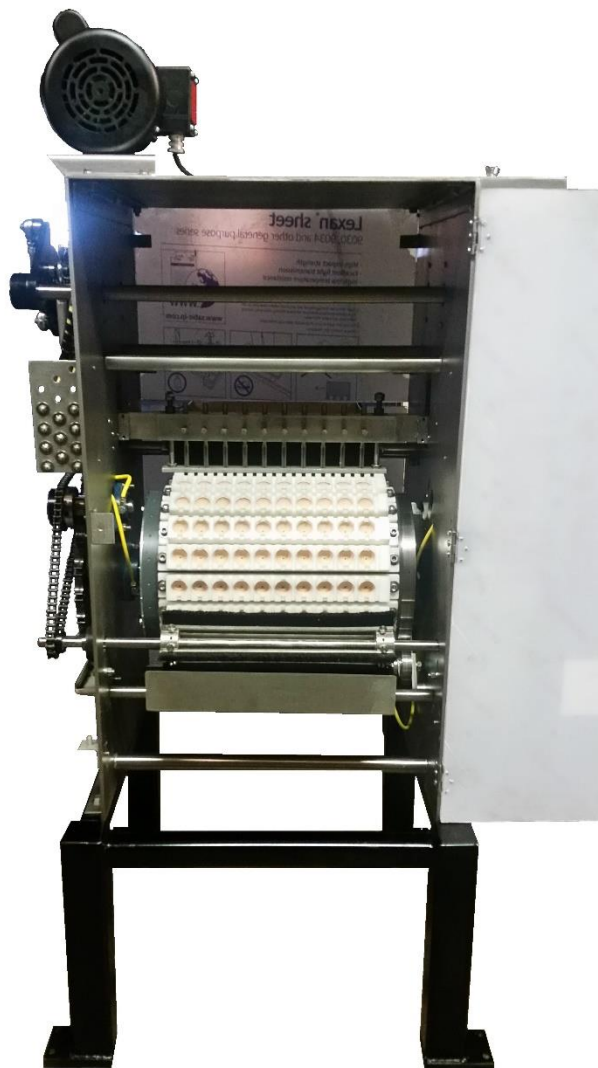

The Dunkley Junior Cherry Pitter is the only machine of its kind. It is built to handle the need for custom pitting on the farm, at the Fruit Stand and for handling the harvest of small orchards.

Dunkley's Junior Cherry Pitter is a bantam-weight machine that does a heavyweight job. Compact and sturdy, it is a small version of the Dunkley pitters used in large cherry-processing plants.

It will pit either sweet or sour cherries.

This trouble-free machine turns out 600-650 pounds of pitted cherries an hour (that is twice the output of our original Jr. Pitter).

Cherries are fed into rubber pockets, featuring an all new cylinder pad. Cherries are then conveniently discharged into your finished packaging system.
